

FLUROKEN 333

— SUPERIOR FORMULATION —

Vast compatibility

Controls hard to kill weeds

Ideal fallow herbicide

FLUROKEN 333 is a group 1 herbicide which controls weeds by disrupting cell growth. Fluroxypyr is active on many weeds: broadleaf and woody as per the label.

A superior fluroxypyr formulation for broadleaf weed control in numerous situations such as fallows, winter cereals, lucerne, maize, sweet corn, pastures, sugar cane, woody weed control and forestry.

BENEFITS

- Controls broadleaf weeds in numerous situations
- Wide compatibility with many products
- Controls hard to kill woody weeds
- Ideal fallow product mixing with glyphosate

BEST USE TIPS

- Do not apply to stressed weeds
- Thorough coverage to the point of run off is essential for effective results
- Do not apply if rain is likely within an hour
- Adhere to plant back restrictions as per label

SURFACTANTS

- **OILS:** Use only Uptake Spraying Oil at the rate of 500 mL / 100 L of spray mix. When using less than 100 L/ha spray volume, ensure a minimum of 250 mL/ha of Uptake is used, unless 1 L / 100 L or 1 L/ha is specified.
- **WETTERS:** Use a 100% concentrate non-ionic surfactant such as Ken-Wett 1000 at 100 mL / 100 L of spray mix where required.
