✓ Strength

KEN-TREL 750 SG is a group I herbicide and member of the Pyridines group of herbicides. The product has the disrupters of plant cell growth mode of action.

Clopyralid is present as the Potassium Salt and it is supplied as a soluble granule.

BENEFITS

- Vast compatibility
- Perfect for controlling legumes and thistles
- Convenient and easy to use granule
- Easy mixing
- Storage stability

BEST USE TIPS

- Ensure plant back periods are adhered to
- For plantback periods of > 4 weeks, 100mm rain must have fallen between application of Ken-Trel 750 SG and planting susceptible crop
- Target young actively growing weeds
- DO NOT apply later than the eight leaf stage of canola or the 1st node stage of winter cereals.

COMPATIBILITY
