

TAEKWANDO 250 CS

- ✓ Advanced technology
- ✓ Capsule suspension
- ✓ Knock-down insecticide

TAEKWANDO 250 CS features the latest formulation technology, capsule suspension (CS).

CS formulations encapsulate the active ingredient in a polymer shell. The active ingredient is released when contact is made with the leaf surface or target species, leading to paralysis and death of the pest. CS formulations enable the slow and consistent release of the active ingredient on the plant surface, leading to more consistent results. The active ingredient, 250 g/L LAMBDA-CYHALOTHRIN, works rapidly to target and control insect pests in Cotton, Sorghum, Sunflowers, Barley, Wheat and various other field crops

PRODUCT FEATURES AND BENEFITS

- **Rapid knock-down** of pests through quick-release of encapsulated active ingredient
- Particularly suitable for **ultra-low volume (ULV)** application due to very low application rates and easy mixing with spray oils
- Registered on an extensive range of crops and pastures
- **Rapid Rainfastness** for quick and reliable usage
- **Highly concentrated formulation** – Reduced packaging, transport and handling
- Compatible with a wide number of herbicides, insecticides and fungicides

PRODUCT DETAILS

PRODUCT:
TAEKWANDO 250 CS

ACTIVE CONSTITUENT:
250 g/L LAMBDA
CYHALOTHRIN

FORMULATION: CS

INSECTICIDE GROUP: 3A

PACK SIZES: 5L

APVMA Approval Number:
85948 / 120508

BEST USE TIPS

- TAEKWANDO 250 CS is a contact and residual insecticide. Best results will be obtained if applied as a protective treatment at regular intervals.
- **For ground or aircraft application with water** – TAEKWANDO 250 CS mixes readily with hard or soft water. Add the required quantity of product to water whilst under agitation to ensure thorough mixing.
- Agitate while spraying and do not let the mixed solution stand longer than 24 hours before use.
- For *Helicoverpa* species if spraying frequency based on scouting, application at egg hatching will give optimum results.
- **For ULV application with oil** – Mix TAEKWANDO 250 CS with a mineral spraying oil (for example KOIL by KENSO AGCARE). Add the required quantity of product to oil whilst under agitation to ensure thorough mixing. Agitate while spraying.
