### Long Term Exposure

When this product is used according to the directions, prolonged exposure to users is not expected. In a 1 year study with dogs given oral doses of 0.25 to 1mg/kg/day, there were no changes in tissue at any dose level. However, some dogs at the 0.5 and 1 mg/kg/day levels had papillary dilation, weight loss, lethargy, tremors and recumbency. The NOEL for this study was 0.25 mg/kg/day. Similar results were seen in a 2 year study with rats fed 0.75, 1.5 or 2 mg/kg/day. No changes in the nervous or muscular systems were observed, but rats in all dosage levels exhibited body weight gains significantly higher than the controls. When mice were fed 8 mg/kg/day, the highest dose tested, for 94 weeks, the males developed dermatitis and changes in blood formation in the spleen, while females exhibited tremors and weight loss.

Abamectin has produced cleft palate in the offspring of treated mice and rabbits, but only at doses that were also toxic to the mothers. There were no birth defects in the offspring of rats given up to 1 mg/kg/day.

Abamectin is not mutagenic. Abamectin was not carcinogenic in rats of mice fed the maximum tolerated doses.

### Other Information

The ADI for abamectin is set at 0.001 mg/kg/day, with corresponding NOAEL of 0.12 mg/kg/day.  
\*ADI= Acceptable Daily Intake; NOAEL: No Observable Adverse Effect Level. Data adopted from Australia ADI List, March 2023.

## SECTION 12 – ECOLOGICAL INFORMATION

### Persistence / Degradability

Abamectin was found to be degraded readily by soil microorganisms. The average half-life in soil is 5-10 hours and in water 18 hours. In addition, abamectin does not persist or accumulate in the environment.

### Known Harmful Effects on the Environment

Abamectin binds tightly to soil between with rapid degradation and by soil microorganisms. No bioaccumulation.

No information is available for the product. The following information refers to the active ingredient, abamectin.

### Toxicity birds

Toxic to waterfowl (Mallard duck LD<sub>50</sub> =84 mg/kg)

Relatively non-toxic to upland game birds (Bobwhite quail LD<sub>50</sub> > 2000 mg/kg)

### Toxicity fish

Rainbow trout LD<sub>50</sub> = 3.6 µg/L

Bluegill sunfish LD<sub>50</sub> = 9.6 µg/L

### Toxicity *Daphnia magna*

LC<sub>50</sub> (48 hour) = 0.34 µg/L.

Toxic to bees.
